

CONSOLIDATING STEM AND DIAPHRAGM NUT IN 2"-3" PBT LEVER OPERATED DUMP VALVES

This product notice is to inform you that we are consolidating the stem and diaphragm nut into one stem on all 2" and 3" Piston Balanced Lever Operated Dump Valves.

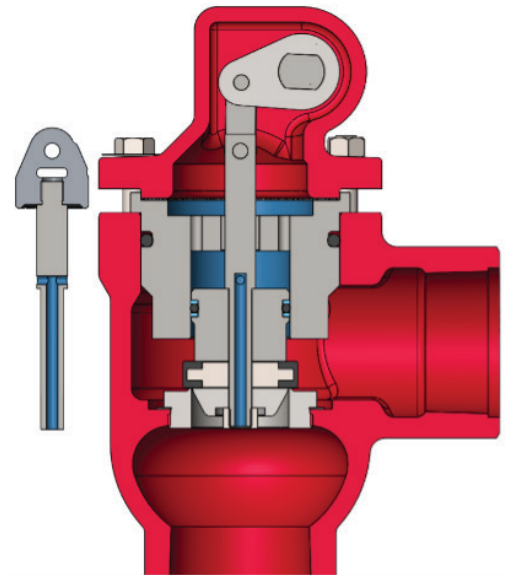

The benefits of this change are:

- Reduced number of components in the PBT Lever Operated Dump Valve
- Time savings on disassembly and reassembly
- Tighter tolerance in the link pin hole to help reduce rotational play in the lever arm

The new stems will start being assembled into new products in April 2023, depending on existing stock levels.

Part Numbers Effected:

Description	Current Part	New Part	Estimated Release Date
2" Stem	6790	7589 Stem	04/18/2023
2" Diaphragm Nut	2972		
2" Stem 316SS	6790S6	7589S6 Stem	03/01/2024
2" Diaphragm Nut 316SS	2972S6		
3" Stem	7142	7887 Stem	04/17/2023
3" Diaphragm Nut	2973		

On the left is shown the old style stem with diaphragm nut attached. The new stem is shown installed in the valve.

Note that the diaphragm nuts listed above will not be discontinued since they will still be used in the Diaphragm Balanced Valves.

The current stems listed above will be discontinued.
