

NEW CONVERSION KITS AVAILABLE FOR OUTSIDE SUPPLY REGULATORS

This product notice is to inform you that new conversion kits are now available for Back Pressure with Outside Supply and Pressure Reducing Regulators with Outside Supply (BPOS and (PROS).

With the rapidly increasing demand for Outside Supply Regulators and component items used to convert standard BP and PR valves over to service with outside supply, Kimray is now offering conversion kits for both Back Pressure with Outside Supply (BPOS) and Pressure Reducing with Outside Supply (PROS) regulators!

Please reference the table below to find the conversion kit that is right for you:

Material	Back Pressure	Pressure Reducing
Ductile	ROA	ROB
Steel	ROC	ROD

Each of the kits listed above cover conversions for valve sizes 2-6”.

Because of this and other packaging limitations, no tubing or fittings will be included in the kits. There will, however, be Kit Sheets included that detail the tubing orientations for each valve size.

For any questions or concerns, please contact Jeff Port.
