

PNEUMATIC LEVEL SWITCH FILTER CHANGE

This product notice is to inform you that we are changing the filter on the Pneumatic Level Switch.

CUA with Old Filter

CUA with New Filter

This change eliminates the bulky YAS filter from the back of the level switch and replaces it with the same 40 Micron filter used in the Gen 3 Pneumatic Level Controller.

As always, we recommend using clean, dry gas in any system where the gas will be running through a pilot. The provided filter is meant to provide a last-step filtration to prevent any unexpected particles from potentially affecting the operation of the pilot.

This change is in effect and the new filter is being installed on all new pneumatic level switches beginning with the serial number 2260630000.
