

## DISCONTINUATION OF YBA

This product notice is to inform you that we are discontinuing the YBA (Priority Signal Relay) effective March 9, 2026

**Discontinued: YBA**

**Recommended Replacement: KSCAI71HI**

The YBA is a biased, high-pressure selection relay used in pneumatic control applications where a modulated signal can be overridden by a shut-in or priority signal.

This product has been identified as a low-volume accessory item with unique components not shared across other Kimray product lines. Through our strategic partnership with ControlAir, Kimray now offers access to equivalent relays that can be configured for either high-pressure or low-pressure signal selection.

Specifically, the ControlAir SuperMite 71L/H relay provides comparable functionality at a more cost-effective price for end users. This relay, configured as a high-pressure selector relay, will be offered through Kimray using the following product code: **KSCAI71HI**.

Minimal customer impact is expected for this product discontinuation. Additional product information on the ControlAir SuperMite 71H is available on Kimray's website. For further assistance, please contact your local Kimray sales representative, authorized distributor, or our Technical Sales Support team.
