

EXTRA O-RING REMOVED FROM HIGH PRESSURE CONTROL VALVE TOPWORKS

This product notice is to inform you that we are removing an extra O-Ring from our High Pressure Control Valve Topworks.

Kimray High Pressure Control Valves feature a field-reversible topworks that can be configured to meet your specific control needs. In the past, an extra O-Ring was included on the atmospheric side of the topworks for a product that has since been discontinued.

This change eliminates the extra O-Ring on the atmospheric side. Associated repair kits will also include one less O-Ring.

One O-Ring will continue to be necessary on the supply side depending on whether your topworks is configured to fail closed (pressure to open) or fail open (pressure to close).
